PROGRAM BRIEF

In our rapidly advancing technological world, cyber security plays an increasingly critical role. This course offers a comprehensive exploration of network security, penetration testing, and computer forensics, alongside a systematic approach to information security management that encompasses various perspectives and technical aspects. You will delve into specialized technical disciplines, focusing on areas such as secure software platform development and defense against sophisticated attack methods that compromise system security and disrupt normal functionality. The program also integrates professional skills related to audit, management, and risk, covering both cyber security and data protection regulations within institutions and organizations.

Throughout the course, you will delve into topics such as cryptography, ethical hacking, penetration testing, information security management, information risk management, software security, and the implementation of secure systems. The curriculum, supported by experienced faculty, equips individuals with the necessary knowledge and skills to obtain the required accreditation and advance their careers in the field.
